curl --request POST \
  --url localhost:3000/api/projects \
  --header 'content-type: application/json' \
  --data '{
    "email" : "email",
    "first_name" : "First Name",
    "last_name" : "Last Name",
    "password" : "password"
  }'
```

POST Login a User

localhost:3000/api/login

POST /api/login

REQUIRES: email (Unique, not null) password (not null, less than 72 characters)

RETURNS: JSON Formatted message id: User-ID email: User email first_name: User first name last_name: User last name token: User Token

ERROR MESSAGES:

HEADERS

Content-Type

application/json

BODY

```
{
  "email" : "user@example.com",
  "password" : "password"
}
```

Sample Request

Login a User

```
curl --request POST \
  --url localhost:3000/api/login \
  --header 'content-type: application/json' \
  --data '{
    "email" : "user@example.com",
    "password" : "password"
  }'
```

DELETE Logout a User

localhost:3000/api/logout

DELETE /api/logout

REQUIRES: Do not send a token with the request

RETURNS: JSON Formatted message "Logout complete."

ERROR MESSAGES: N/A

HEADERS

Content-Type

application/json

Sample Request

Logout a User
<pre>curl --request DELETE \ --url localhost:3000/api/logout \ --header 'content-type: application/json'</pre>

POST Create a new Project

localhost:3000/api/projects

POST /api/projects

REQUIRES: title (string, Not null) description (text, not null) author (string, not null) project_num (string, not null, less than 72 characters) token (Logged In User's Token)

RETURNS: JSON Formatted message id: Project-ID title: Project Title description: Project Description author: Project Author

id: User-ID email: User email first_name: User first name last_name: User last name

HEADERS

Content-Type
application/json

BODY

```
{  
  "title" : "Title",  
  "description" : "Description",  
  "author" : "Author",  
  "project_num" : "ProjectNum",  
  "token" : "UserToken"  
}
```

Sample Request

Create a new Project
<pre>curl --request POST \ --url localhost:3000/api/projects \ --header 'content-type: application/json' \ --data '{</pre>

```
"title" : "Title",
"description" : "Description",
"author" : "Author",
"project_num" : "ProjectNum",
"token" : "UserToKen"
}'
```

POST Invite a User to a Project

localhost:3000/api/projects/y7zJUKWSMfYFbKqJrcTWdJTU/invitations

POST localhost:3000/api/projects/:project_token/invitations

REQUIRES :project_token :email (E-mail address of User to share project with)

RETURNS: JSON formatted message: a) ":email has been added to Project successfully!" b) ":email does not have an account and will have to sign up."

This will e-mail the users after the above checks are performed inviting them to sign up or view their project.

HEADERS

Content-Type

application/json

BODY

```
{
  "email" : "kalea.wolff+hiragen@gmail.com"
}
```

Sample Request

Invite a User to a Project
<pre>curl --request POST \ --url localhost:3000/api/projects/y7zJUKWSMfYFbKqJrcTWdJTU/invitations \ --header 'content-type: application/json' \ --data '{ "email" : "kalea.wolff+hiragen@gmail.com" }'</pre>

GET Show a Project
